                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note-"Organ: colon; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_CGAP_Colo was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 1144584-1145351).

                                                                                                                                                                                                                                                            polylinker; Plasmid DNA from the normalized library NCI_CGAP_GC4 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDS 1257096-125863), 1459064-1470983, and 1475592-1476743). Subtraction by Bento Soares and M. Fatima Bonaldo. "

                   Claim 6; Fig 1; 58pp; English.

This sequence encodes human eph/elk-like kinase (HEK). HEK is expressed in both pre-B cells and T cell lines and in a number of tumours of human origin, eg. lymphoid tumours LKG3, Lila-1 and JM, and the epithelial tumour HeLa. This receptor-type thymidine kinase (TK) and/or its ligands are useful as agents in modulation of the production and/or function of pre-B, B and T cells. The TK and its analogues have activity in transducing signals or in stimulating cellular responses such as growth and/or differentiation.

Probes derived from the EPH-related PTKs Cek4 (Q90659) and Ce (Q90660) were used to isolate novel CDNA clones (Q90652-58, Q90661-62) from chicken embryo and embryonic brain libraries. Cek4 is highly expressed in the chicken developing brain and embryonic tissues, as well as in the adult brain and retina. Sequence 3254 BP; 926 A; 737 C; 796 G; 795 T;

Also described are the corresponding prot Ror-1; Ror-2; Ehk-1; and Ehk-2. The proteins are orphan receptor tyrosine kinases. The present sequence encodes rat Ehk-1. AL-1 neurotrophic factor, an eph-tyrosine kinase ligand - used in treatment and diagnosis of neuronal disorders and repartment and diagnosis of neuronal disorders and analysis - related conditions.

Example 1; Page 47-49; 75pp; English.

A CDNA clone (T18893) codes for rat REK7 (R97853), an eph-related tyrosine kinase receptor, for which AL-1 (see also W97854) is a CL ligand. It was isolated using degenerate receptor tyrosine kinase primers (T18894-96) to amplify cDNAs of an adult mouse hippocampal CDNA library. A PCR fragment was used as a probe to isolate the full-length REK7 cDNA from a rat hippocampal cDNA library. An PCR Fragment was used cell lines for surface expression of REK7-binding activity. Primers based on isolated CLDNA, and an amplified fragment was used to screen a human foetal CCLDNA, and an amplified fragment was used to screen human foetal cDNA library, leading to the isolation of AL-1 cDNA (T18897). ```
The present sequence encodes mouse Bsk, which is a receptor-like tyrosine kinase. The nucleic acid sequence encoding Bsk can be used in Bsk nucleic acid probes, which can be used in detecting alterations in the level of Bsk messenger-RNA (mRNA) in biological samples isolated from a mammal afflicted with a disease, such as neurodegenerative diseases or disorders and neoplasms. The nucleic acid sequence can also be delivered into the limbic system of patients with limbic system neurodegenerative disease, disorder or injury, to promote or enhance limbic system neuron regeneration or growth. Such neurodegenerative disease include, chromosomal abnormalities, degenerative growth and development disorders, viral infections, bacterial infections, brain injuries, neoplastic conditions, Alzheimer's disease, epilepsy, schizophrenia, or stroke and cerebral ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match 43.9

The present invention describes nucleic acid molecules for ror-1, ror-2, ehk-1 and ehk-2. Also described are the corresponding prot Ror-1; Ror-2; Ehk-1; and Ehk-2. The proteins are orphan receptor tyrosine kinases. The present sequence encodes rat Ehk-2. Sequence 3592 BP; 946 A; 916 C; 894 G; 834 T;

PS Claim 1; Page 57-62; 133pp; English.

CC cDNAs (702946-49) coding for 4 novel human EPH-like receptor protein CC tyrosine kinases, HEK5, HEK7, HEK8 and HEK11 (R85089-92), respectively, CC were isolated from a human foetal brain cDNA library using a directed CC PCR approach with primers (see T02960-61) based on conserved regions of CC receptor PTKS and EPH-like receptor PTKS. HEX5, HEX7 and HEX8 show extensive homology to the catalytic domain of chicken EPH-like receptors. The isolated cDNAs are used for prodn. of CEPH-like receptor. The isolated cDNAs are used for prodn. of recombinant HEKS and chimeric receptors, in hybridisation assays, and to detect abnormalities in HEK receptor genes.
